Introduction to GPUs

CSC 213 – March 2, 2021
Agenda for Today

1. Lab and Assignment Q&A
2. GPU Overview
3. In-Class Exercise
Q&A
For part B, do we need to use a linked list or something else to remember the usernames and hashed passwords?

Yes, a linked list is reasonable. It works well in this case because you’ll need to walk through the entire set of password hashes for each candidate hash: we don’t need fast indexing or searches.
