Worm! Lab
CSC 213 – October 5, 2022
Agenda for Today

1. Q&A
2. Reminders
3. Lab
Assignment Questions
Lab Questions

If we have a global array of pointers, does that behave any differently than other globals, or a local variable?

If you have an array of pointers called freelists, and you operate on freelists[5], that's no different than operating on a single global pointer, or even a local except that the variable lives longer than the current scope.
